

Adaptive Responses to Red Swamp Crayfish Invasions in Michigan

Join us for a **FREE** virtual seminar!

Red swamp crayfish are an invasive species which can outcompete native species, introduce diseases into the local environment, and destabilize river banks! We are pleased to have Dr. Brian Roth from the Dept. Fisheries & Wildlife (Michigan State University) discuss his research examining different adaptive response strategies to local red swamp crayfish invasions in Michigan. *Registration is required

*Wednesday February 1, 2023
6:30pm to 7:30pm*
